ABOUT THE PRESENTATION

Guam has been in a public health emergency for over nine months due to the spread of COVID-19. We know to wash our hands, social distance, and wear masks. But what other important details are we missing?

Ending the epidemic on Guam requires that all of us understand how a public health response is critical. We will hear about updates in COVID science, the role of critical Non-Pharmaceutical Interventions, such as contact tracing, and the prospect of a vaccine in the near future!

ABOUT THE PRESENTER

Mike Reid is an infectious disease physician at San Francisco General Hospital and the University of California, San Francisco (UCSF). He is also the Associate Director of the Center for Global Health Diplomacy, Delivery and Economics at UCSF. He completed medical school at Cambridge University and medical residency in London, England and New York, USA. He did his infectious disease fellowship at UCSF and holds a Master's degree in public health from UC Berkeley.

Since the start of COVID-19 outbreak he has been seconded to San Francisco's Department of Public Health, where he is involved with running the contact tracing program. Mike is also the Chief Medical Officer for California's Contact tracing training academy and heads the UCSF's Pandemic Initiative for Equity and Action (UPIEA). Prior to joining UCSF, he spent five years working in PEPFAR funded programs in Africa and was the lead physician in the University of Pennsylvania's Global Health program in Gaborone, Botswana for three years. Michael has published more than 60 peer-reviewed publications on topics related to improving TB and HIV service delivery in low-income settings.
